

MIDHUN NAIR T S

Software Engineer | MEAN Stack Developer | Angular, Node.js, MongoDB, Express.js

midhunnairst17@gmail.com | +91 7902755306 | [Portfolio](#) | [LinkedIn](#) | [GitHub](#) | Bangalore

PROFILE

Full Stack Developer with around 3 years of experience in building scalable and secure web applications using MongoDB, Express.js, Angular, and Node.js (MEAN Stack). Proven expertise in micro-frontend architectures, API development, and system optimization, leading to 40% faster deployments and 30% improved development efficiency. Recognized for innovative solutions and strong technical problem-solving. Currently working with Cisco on automation tools and network orchestration systems.

EXPERIENCE

MEAN-STACK DEVELOPER (Contract – Cisco via TEKsystems)

Cisco Systems | 2025 – Present | Bangalore

- Developed internal automation tools and utilities using **Node.js, Python, and JavaScript**, supporting Cisco's network orchestration and infrastructure workflows.
- Built reusable **JavaScript libraries and packages** adopted across internal platforms, improving code reuse and reducing development effort.
- Designed and developed a **secure file management application** using **Angular, Node.js, and Express.js**, enabling video streaming and advanced document preview capabilities for enterprise use
- Implemented **security best practices** including rate limiting, data encryption, and custom middleware, ensuring secure handling of sensitive file operations.
- Automated network provisioning workflows by developing and optimizing **Cisco NSO service models**, improving provisioning efficiency and system reliability.
- Managed and maintained **Docker and Kubernetes-based lab environments**, enabling containerized testing, deployment simulations, and scalable infrastructure validation.
- Built **automation scripts**, reducing manual operational effort and improving team productivity.
- Collaborated with **cross-functional teams** to integrate APIs, orchestration modules, and automation scripts into production systems.

Software Engineer

Signdesk Pvt. Ltd. | 2022 – 2025

- Spearheaded the migration from a monolithic architecture to a micro-frontend architecture using **Single-SPA, Webpack Module Federation, and Lazy Loading**, reducing deployment times by **40%** and enabling independent module updates.
- Developed and maintained a **Bitbucket-hosted SDK** with modular, reusable UI components (tooltips, loaders), reducing redundant UI development efforts by **30%** and enhancing code reusability.
- Designed and optimized **interactive dashboards** leveraging **Wavesurfer.js** for **audio visualization**, **Konva.js** for **vector graphics rendering**, and **Gridster.js** for **dynamic grid layouts**, increasing user engagement by **20%**.
- Implemented **OWASP-compliant security best practices**, including **JWT authentication**, **CSRF/XSS protection**, and secure API endpoints, reducing reported security vulnerabilities by **60%**.
- Code Optimization:** Implemented **modular CSS architecture**, reducing redundant code by **25%** and improving maintainability.
- Developed backend APIs for PDF conversion and Google Sheets integration using Node.js and Express.js, streamlining business workflows.
- Used **Git** and **Bitbucket** for version control and collaborated in **Agile sprints** using tools like **Melento**.

KEY ACHIEVEMENTS

- Performance of Excellence Award (Jan 2026)** for outstanding performance and contribution.
- Best Employee of the Quarter (Q2-2024):** Recognized for pioneering solutions and delivering critical milestones ahead of deadlines.
- Deployment Optimization:** Spearheaded a **40% deployment time reduction** through a scalable micro-frontend transformation.
- User Engagement:** Developed interactive dashboards using **Wavesurfer.js**, **Konva.js**, increasing customer engagement by **20%**.
- Leadership Excellence:** Successfully managed and delivered 5+ concurrent projects, maintaining high quality and efficiency.high quality.

PROJECTS

Real-Time Document Sign Workflow System

- Developed an end-to-end e-signature platform with permission management, document versioning, and **PDF generation** using **Angular, Node.js, and MongoDB**.

Interactive Dashboard System

- Built configurable dashboards with real-time data representation using **Konva.js and Gridster.js**, supporting drag-and-drop widgets and custom layouts.

Secure eSign Authentication Module

- Implemented **JWT-based OAuth2 login** with role-based access control and activity tracking, ensuring OWASP security compliance.

SDK for Internal Angular Tools

- Created reusable UI components such as alerts, loaders, and tooltips, distributed internally via **Bitbucket** for use in multiple Angular applications.

Audio-Based Compliance Visualizer

- Integrated **Wavesurfer.js** for **audio waveform visualization** within Angular forms, enhancing compliance workflows involving audio evidence.

Document conversion API development

- Developed and integrated **document conversion APIs** using Python, enabling seamless conversion between formats like PDF, DOCX, XLSX, and images.

Real-Time Collaborative Document Editor

- Designed a **micro-frontend document editor**, integrating **React for login** and **Angular for document handling**.
- Implemented **real-time multi-user collaboration** using **Socket.IO and Quill Editor** with **Delta format**.
- Integrated **MongoDB** for scalable document storage, permission management, and **auto-save functionality**.

Angular Alerts Package

- Developed an **Angular-based alert package**, inspired by Sweet Alert, featuring customizable modals, confirmations, and dynamic content.
- Enhanced **reusability and performance** across multiple applications by optimizing **component structure and API efficiency**.

Interactive T-Shirt Customization Application

- Developed a real-time T-shirt customization app using **Angular and Fabric.js**, enabling synchronized front/back design editing with dynamic canvas interactions.
- Optimized performance using **Angular Signals**, ensuring smooth state updates and responsive UI during complex design operations.

Dynamic Resume Builder

- Built a dynamic resume builder using **Angular and Signals** with a drag-and-drop interface powered by **Angular CDK** for flexible layout customization.
- Implemented high-fidelity PDF export using **html2canvas** and **jsPDF**, generating production-ready resumes with real-time preview.

EDUCATION

Bachelor of Engineering in Information Science | Yenepoya Institute Technology (2018 – 2022) | CGPA 7.91

SKILLS

- **Programming Languages:** JavaScript, TypeScript, Python
- **Frontend Technologies:** Angular (14,16,18), Single-SPA, HTML5, CSS3, SCSS/SASS
- **Backend Technologies:** Node.js, Express.js, RESTful APIs
- **Databases:** MongoDB
- **DevOps & Tools:** Git, Bitbucket, NPM, Docker (basic), Kubernetes(basic), CI/CD (basic), Postman
- **Other Expertise:** Micro-frontend architecture, Web performance optimization, Security practices, Agile methodology
